

A-Level CHEMISTRY

FOURTH EDITION

**E.N.
Ramsden**

CONTENTS

Preface

xi Acknowledgements

xiii

PART 1: THE FOUNDATION

CHAPTER 1: THE ATOM

1.1	Matter	3	1.7	The fundamental particles	8
1.2	The atomic theory	4	1.8	Nuclides and isotopes	9
1.3	The size of the atom	6	1.9	Mass spectrometry	9
1.4	The electron	6	1.10	Nuclear reactions	12
1.5	The atomic nucleus	6		Questions on Chapter 1	18
1.6	The neutron	8			

CHAPTER 2: THE ATOM – THE ARRANGEMENT OF ELECTRONS

2.1	Light from atoms	21	2.7	Features of the Periodic Table	34
2.2	Atomic spectra	22	2.8	The electronic configurations of the elements	38
2.3	Electrons in orbits	23	2.9	The repeating pattern of the elements	41
2.4	The wave theory of the atom	27		Concept map: Atomic structure	42
2.5	Electronic configurations of atoms	30		Questions on Chapter 2	43
2.6	The history of the Periodic Table	32			

CHAPTER 3: EQUATIONS AND EQUILIBRIA

3.1	Equations, equilibria and calculations – who needs them?	46	3.12	Equations for reactions of gases	57
3.2	Formulae	46	3.13	Concentration	58
3.3	Equations	48	3.14	Volumetric analysis	62
3.4	Relative atomic mass	51	3.15	Equations for oxidation–reduction reactions	65
3.5	Relative molecular mass	52	3.16	Oxidation number	67
3.6	The mole	52	3.17	Oxidation numbers and nomenclature	71
3.7	Molar mass	53	3.18	Titrimetric analysis, using redox reactions	73
3.8	Empirical formulae	55	3.19	Equilibrium	74
3.9	Molecular formulae	55	3.20	Chemical equilibria	76
3.10	Calculations of percentage composition	55		Concept map: Quantitative chemistry	78
3.11	Equations for reactions of solids	56		Questions on Chapter 3	79

CHAPTER 4: THE CHEMICAL BOND

4.1	Diamond and graphite – the difference lies in the bonds	83	4.6	Covalent compounds	103
4.2	Ions	84	4.7	The coordinate bond	106
4.3	The ionic bond	89	4.8	Intermolecular forces	108
4.4	The covalent bond	97		Concept map: The chemical bond	116
4.5	Properties of ionic and covalent substances	101		Questions on Chapter 4	117

CHAPTER 5: THE SHAPES OF MOLECULES

5.1	Haemoglobin	120	5.4	Delocalised orbitals	130
5.2	The arrangement in space of covalent bonds	120		Concept map: The shapes of molecules	133
5.3	Shapes of molecules: a molecular orbital treatment	127		Questions on Chapter 5	134

CHAPTER 6: CHEMICAL BONDING AND THE STRUCTURE OF SOLIDS

6.1	Profile: Dorothy Crowfoot Hodgkin (1910–1995)	136	6.7	Layer structures	142
6.2	X ray diffraction	137	6.8	The structure of metals	143
6.3	The metallic bond	137	6.9	The structure of ionic crystals	145
6.4	Ionic structures	138	6.10	Liquid crystals	147
6.5	Molecular solids	140		Concept map: The structure of solids	146
6.6	Macromolecular structures	140		Questions on Chapter 6	147

PART 2: PHYSICAL CHEMISTRY**CHAPTER 7: GASES**

7.1	Air bags	151	7.6	Dalton's Law of partial pressures	155
7.2	States of matter	151	7.7	The kinetic theory of gases	156
7.3	The gas laws	152	7.8	Real gases: non-ideal behaviour	157
7.4	Avogadro's hypothesis	154		Concept map: Gases	158
7.5	The ideal gas equation	154		Questions on Chapter 7	159

CHAPTER 8: LIQUIDS

8.1	An incredible liquid	160	8.6	Partition of a solute between two solvents	172
8.2	The liquid state	160	8.7	Partition chromatography	174
8.3	Vaporisation	162		Concept map: Liquids	178
8.4	Molar mass determination	165		Questions on Chapter 8	179
8.5	Solutions of liquids in liquids	166			

CHAPTER 9: SOLUTIONS

9.1	An unusual solvent	181	9.3	Recrystallisation	183
9.2	Solutions of solids in liquids	182		Concept map: Solutions	185

CHAPTER 10: THERMOCHEMISTRY

10.1	Sources of energy	186	10.11	Average standard bond enthalpy	200
10.2	Fossil fuels	186	10.12	The Born–Haber cycle	203
10.3	Why do reactions happen?		10.13	Lattice enthalpies	205
10.4	Forms of energy	188	10.14	Enthalpy changes involved when ionic compounds dissolve	207
10.5	Exothermic and endothermic reactions	189	10.15	Entropy	209
10.6	Enthalpy changes	190	10.16	Free energy, the deciding factor	211
10.7	Standard enthalpy changes	191	10.17	Link with kinetics	213
10.8	Methods for finding the standard enthalpy of reaction	193		Concept map: Thermodynamics	214
10.9	Hess's Law	196		Questions on Chapter 10	215
10.10	Standard enthalpy change for a chemical reaction	198			

CHAPTER 11: EQUILIBRIA

11.1	Fritz Haber	219	11.6	Examples of reversible reactions	225
11.2	Reversible reactions	219	11.7	Oxidation–reduction equilibria	228
11.3	The equilibrium law	222	11.8	Phase equilibrium diagrams	228
11.4	Position of equilibrium	222		Concept map: Equilibrium	230
11.5	The effect of conditions on the position of equilibrium	222		Questions on Chapter 11	230

CHAPTER 12: ELECTROCHEMISTRY

12.1	Sir Humphry Davy (1778–1867)	233	12.7	Indicators	249
12.2	Electrolysis	233	12.8	Buffer solutions	253
12.3	Examples of electrolysis	236	12.9	Salt hydrolysis	256
12.4	Explanation of electrolysis	237	12.10	Complex ions	258
12.5	Applications of electrolysis	239		Concept map: Acid–base equilibria	259
	Concept map: Electrolysis	241		Questions on Chapter 12	260
12.6	Ionic equilibria	242			

CHAPTER 13: OXIDATION–REDUCTION EQUILIBRIA

13.1	Electrochemical transport	264	13.5	Electrochemical cells	274
13.2	Electrode potentials	265		Concept map: Redox equilibria	277
13.3	Redox systems	268		Questions on Chapter 13	278
13.4	Rusting and standard electrode potential	273			

CHAPTER 14: REACTION KINETICS

14.1	The speeds of chemical reactions	281	14.12	Methods of finding the rates of chemical reactions	297
14.2	Factors which affect the speeds of chemical reactions	282	14.13	The results of measurements of reaction rates	298
14.3	The collision theory	287	14.14	Order of reaction	300
14.4	Catalysis	290	14.15	Photochemical reactions	306
14.5	Homogeneous catalysis	291	14.16	The effect of temperature on reaction rates	306
14.6	Heterogeneous catalysis	292	14.17	Theories of reaction rates	307
14.7	Catalytic converters	293	14.18	Rate-determining step	311
14.8	Autocatalysis	294		Concept map: Chemical kinetics	314
14.9	Link with thermodynamics	295		Questions on Chapter 14	315
14.10	The study of reaction kinetics	295			
14.11	Average rate	296			

PART 3: INORGANIC CHEMISTRY

CHAPTER 15: PATTERNS OF CHANGE IN THE PERIODIC TABLE

15.1	Primo Levi's Periodic Table	321	15.6	Oxides, chlorides and hydrides in the Periodic Table	332
15.2	Physical properties	322	15.7	Variable oxidation state	335
15.3	Elements of the s block, d block and p block	326		Concept map: The Periodic Table	336
15.4	The elements of Period 3	327		Questions on Chapter 15	337
15.5	Compounds of Period 3	329			

CHAPTER 16: GROUP 0: THE NOBLE GASES

16.1	The 'new gas'	340	16.3	Compounds of the noble gases	341
16.2	Members of the group	341		Questions on Chapter 16	341

CHAPTER 17: HYDROGEN

17.1	Occurrence	342	17.4	Water	343
17.2	Manufacture and uses	343	17.5	Fluoridation of water	344
17.3	Laboratory preparation and reactions	343		Questions on Chapter 17	345

CHAPTER 18: THE s BLOCK METALS: GROUPS 1 AND 2

18.1	Two industries based on salt	346	18.8	Reactions of Group 2	356
18.2	The members of the groups	347	18.9	Compounds of Group 2	357
18.3	Uses	348		Concept map: Group 1 and Group 2	360
18.4	Occurrence and extraction	349		Concept map: Group 2	361
18.5	Reactions of Group 1	349	18.10	Extracting metals from their ores	362
18.6	Compounds of Group 1	350		Concept map: Extraction of metals I	363
18.7	Lithium	355		Questions on Chapter 18	364

CHAPTER 19: GROUP 3

19.1	The aluminium problem	368	19.4	Aluminium compounds	371
19.2	The members of the group	369		Questions on Chapter 19	373
19.3	Aluminium	369			

CHAPTER 20: THE HALOGENS

20.1	DDT: a life-saving compound of chlorine	374	20.7	Reaction with alkalis	382
20.2	The members of the group	375	20.8	Metal halides	384
20.3	Bond formation	376	20.9	Non-metal halides	385
20.4	Oxidising reactions	378	20.10	Summary of Group 7	387
20.5	Commercial extraction	379	20.11	Uses of halogens	388
20.6	Reaction with water	382		Concept map: The halogens	389
				Questions on Chapter 20	390

CHAPTER 21: GROUP 6

21.1	Oxygen – the breath of life	392	21.7	Oxides	399
21.2	The members of the group	393	21.8	Sulphur dioxide	400
21.3	Reactions of oxygen and sulphur	393	21.9	Sulphuric acid	400
21.4	Allotropes of oxygen	394	21.10	Acid rain	405
21.5	The ozone layer	394	Questions on Chapter 21		408
21.6	Hydrides of oxygen and sulphur	397			

CHAPTER 22: GROUP 5

22.1	Two chemical messengers	410	22.5	Ammonia	414
22.2	The nitrogen cycle	412	22.6	Nitric acid	416
22.3	The members of the group	412	22.7	NPK fertilisers	418
22.4	The Haber process	413	Questions on Chapter 22		421

CHAPTER 23: GROUP 4

23.1	Silicon the semiconductor	423	23.5	The compounds of Group 4	428
23.2	A comparative look at Group 4	425	23.6	The greenhouse effect	435
23.3	Special features of carbon chemistry	426	Concept map: Group 4		439
23.4	Sources and uses of Group 4 elements	426	Questions on Chapter 23		440

CHAPTER 24: THE TRANSITION METALS

24.1	Metals and civilisation	442	24.12	Oxides and hydroxides of transition metals	450
24.2	The first transition series	443	24.13	Oxo-ions of transition metals	452
24.3	Physical properties of transition metals	444	24.14	Chlorides	454
24.4	Chemical properties	445	24.15	Sulphides	456
24.5	Methods of extraction	445	24.16	Complex ions	456
24.6	Uses of transition metals	446	24.17	Iron	462
24.7	Oxidation states	446	24.18	Copper	469
24.8	Catalysis by transition metals	447	24.19	Zinc	470
24.9	Paramagnetism	447	Concept map: Transition metals II		472
24.10	Complex compounds	447	Concept map: Extraction of metals III		473
24.11	Transition metals in gemstones	449	Questions on Chapter 24		474
	Concept map: Transition metals I	450			

PART 4: ORGANIC CHEMISTRY**CHAPTER 25: ORGANIC CHEMISTRY**

25.1	Carbon compounds	479	25.6	Aromatic hydrocarbons	484
25.2	Hydrocarbons	480	25.7	Functional groups	484
25.3	Isomerism among alkanes	481	25.8	Reactions of organic compounds	487
25.4	System of naming hydrocarbons	481	25.9	Isomerism	489
25.5	Alicyclic hydrocarbons	484	Questions on Chapter 25		494

CHAPTER 26: THE ALKANES

26.1	Methane	495	26.5	The car	503
26.2	Petroleum oil	495	26.6	Catalytic converters	504
26.3	Physical properties	497		Questions on Chapter 26	505
26.4	Reactions of alkanes	498			

CHAPTER 27: ALKENES AND ALKYNES

27.1	Ethene	507	27.7	Combustion	510
27.2	Alkenes	507	27.8	Addition reactions	510
27.3	Source of alkenes	508	27.9	Alkynes	521
27.4	Physical properties of alkenes	508	27.10	Ethyne	521
27.5	Structural isomerism	508	27.11	Photochemical smog	521
27.6	Reactivity of alkenes	509		Questions on Chapter 27	523

CHAPTER 28: AROMATIC COMPOUNDS

28.1	Profile: Kathleen Lonsdale (1903–1974)	525	28.7	Addition reactions of benzene	528
28.2	Benzene	525	28.8	Substitution reactions	528
28.3	Some more names of aromatic compounds	527	28.9	Methylbenzene (toluene)	538
28.4	Physical properties of benzene	527	28.10	Reactions of the ring	538
28.5	Sources of benzene	528	28.11	Reactions of the side chain	539
28.6	Reactivity of benzene	528	28.12	The effect of substituent groups on the benzene ring	541
				Questions on Chapter 28	542

CHAPTER 29: HALOGENOALKANES AND HALOGENOARENES

29.1	Anaesthetics	545	29.9	The mechanisms of hydrolysis and elimination reactions of halogenoalkanes	555
29.2	Halogenoalkanes	546	29.10	Halogenoarenes	558
29.3	Physical properties	546		Concept map: Halogenoalkanes and Halogenoarenes	560
29.4	Laboratory methods of preparing halogenoalkanes	548	29.11	Grignard reagents	561
29.5	Uses of halogenoalkanes	548		Questions on Chapter 29	561
29.6	Chlorofluorocarbons, CFCs	548			
29.7	Reactions	551			
29.8	Reactivity	551			

CHAPTER 30: ALCOHOLS AND PHENOLS

30.1	Alcoholic drinks	564	30.9	Phenols	579
30.2	Alcohols	565	30.10	Sources of phenol	580
30.3	Physical properties	567	30.11	Reactions of phenol	580
30.4	Industrial sources of alcohols	568	30.12	The explosion at Seveso	585
30.5	Uses of ethanol and methanol	569		Concept map: Alcohols and phenols	586
30.6	Reactivity of alcohols	571		Concept map: Relationships between alcohols and other series	587
30.7	Reactions of alcohols	572		Questions on Chapter 30	588
30.8	Polyhydric alcohols	578
