

CONTENTS

Chapter: 1

Introduction and nomenclature of organic compounds

- Saturated hydrocarbons
- Unsaturated hydrocarbons
- IUPAC nomenclature of organic compounds
- Longest carbon (parent) chain
- Functional group
- Substituent
- Functional group suffix
- Root
- Substituent prefix
- Multiplier
- Locants
- Naming Alcohols
- Naming Aldehydes
- Naming Ketones
- Cyclic ketones
- Naming carboxylic acid
- Naming Esters
- Naming Acid amides
- Naming Acid halides
- Naming Acid anhydrides
- Naming Ether
- Naming Nitriles
- Naming Amines
- Nomenclature of organic compounds contains multi functional groups
- Nomenclature of homo and heterocyclic organic compounds
- Bicyclic organic molecules nomenclature
- Tricyclic organic compounds nomenclature
- Naming the heterocyclic compounds

Chapter: 2

Aromatic Compounds

- Sources of aromatic compounds
- Naming Aromatic compounds
- Aromatic compounds with only one group attached to the benzene ring
- Aromatic compounds with more than one group attached to benzene ring
- Numbering the ring
- Stability of benzene ring
- Aromaticity and Huckel $4n+2$ Rule
- Aromaticity in heterocyclic compounds
- Basic rules for resonance structures
- Resonance

Chapter: 3

Tautomerism

- Types of tautomerism
- Proton tautomerism
- Keto-enol tautomerism
- Valance tautomerism
- Ring-chain tautomerism
- Annular tautomerism
- Nitro-acinitro tautomerism
- Lactam-lactin tautomerism
- Enamine-Amine tautomerism
- Nitroso-oxime tautomerism
- Enolization
- Based-catalyzed enolization
- Acid-catalyzed enolization
- Erlenmeyer rule
- Significance in Biochemistry
- DNA

Chapter: 4

Acidity and Basicity

- Acidity of organic acids
- Basicity of organic bases
- δ -value and Hammet equation

- Hammett substituent constant

Chapter: 5

Reactive Intermediates

- Carbenes
- Structure of carbenes
- Generation of carbenes
- From aliphatic diazo compounds
- By ketones and aldehydes
- By acid halides
- Types of carbenes
- Applications or reactions of carbenes
- Generation of singlet carbene
- Generation of triplet carbene (diaryl carbene)
- From Diazo compounds
- Reactions of triplet carbenes
- Benzyne
- Preparation of benzyne
- From bromobenzene
- From 2-amino benzoic acid (Anthranilic acid)
- Generation of substituted benzyne
- By Friedel-Crafts Alkylation or Acylation
- Structure of Benzyne
- Reaction of Benzyne
- Diels-Alder's reaction (pericyclic reaction)
- Nitrenes
- Generation of nitrenes
- Preparation of Acylazide
- Structure of Nitrene

Chapter: 6

Stereochemistry

- Chirality
- Optical activity of Enantiomers
- Dependence of optical rotation and Units
- Calculation of concentration
- Elements of chirality
- Centre of chirality
- Axis of chirality

- Plane of chirality
- Helicity of chirality
- Symmetry
- Elements of symmetry
- Plane of symmetry
- Centre of symmetry
- Axis of symmetry
- Isomerism
- Regioisomerism
- Skeletal isomers
- Positional isomers
- Functional isomers
- Stereoisomers
- Configurational isomers
- Conformational isomers
- Enantiomers
- Diastereoisomers
- Epimers
- Drawing three dimensional structure on two dimensional paper
- Sawhorse projections
- Newman projections
- Limitations of sawhorse and newman projections
- Fischer projections
- Conversion of sawhorse and newman projections into Fischer projections
- Non-True Fischer projections
- Nomenclature of chiral compounds (CIP rule)
- Rules for assigning R S configuration
- Atomic number priority
- According to nature of bond
- Configuration
- Relative and absolute configuration
- Retention of configuration
- Inversion of configuration
- Conformation
- Energy calculation
- Ring conformation
- Puckered theory
- Modified CIP rule
- Allenes
- Spirocompounds
- Terphenyls
